STRATOCARB
High Performance Mercury Sorbent

Description	Stratocarb is a high performance powdered activated carbon for mercury capture applications.
Applications	Powdered Activated Carbon injection is recognized as the Best Available Control Technology (BACT) for mercury removal from the flue gases of: – coal fired power plants – waste-to-energy facilities – industrial boilers – cement kilns – incinerators
Specifications / Properties	Iodine Number ---------- 500 mg/g min Moisture ---------- 8 % max Bulk Density ---------- 0.4 - 0.6 g/cc Passing 325 Mesh ---------- 95 % min
Manufacturer	Standard Purification is an innovative activated carbon manufacturing company focused on practical, environmentally-superior solutions to customers' needs. We develop and manufacture custom tailored activated carbon products for removing contaminants from liquids and gases. Standard Purification utilizes a reclaimed raw material and uses only heat and steam for carbon activation.
Delivery	Stratocarb is available for delivery in 50 lb bags, palletized, and in bulk *via* polypropylene bulk sacks, pneumatic tanker trailer and pneumatic rail car.
Safety and Handling	Wet activated carbon removes oxygen from the air. In closed, or partially closed, containers and vessels, oxygen depletion may reach hazardous levels. Workers should follow appropriate procedures when entering confined spaces containing activated carbon.
